On Using Your Retriever

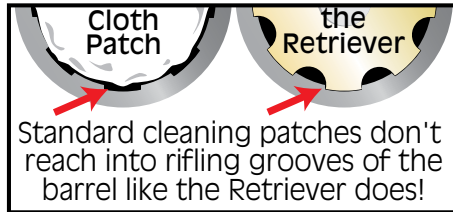

The Retriever's patented design & precision crafting
clean rifling grooves like no other tool can!

It Isn't Clean Unless It's Pro Clean

 Made in the USA

the Retriever™

Standard cleaning patches don't reach into rifling grooves of the barrel like the Retriever does!

The photo shows how much debris is removed **AFTER** a patch with cleaning fluid has already been run through the barrel.

The Retriever cleans your muzzleloader like nothing else can for enhanced accuracy!

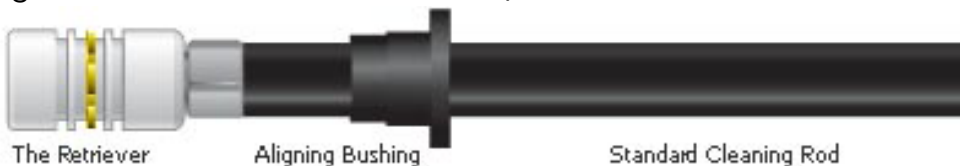

Accuracy of shot placement depends upon consistent loading pressure. Consistent loading pressure depends upon a clean rifle.

The Retriever cleans, removes and collects the powder, plastic and lead residue left in the rifling grooves after each shot.

You get a thoroughly cleaned barrel, promoting consistent loading and shooting accuracy.

Each Retriever model is precision manufactured to match the rifle's specifications.

One size does NOT fit all! This makes sure the Retriever cleans the most debris from you rifle.

Choosing the right Retriever model for your muzzleloader

Not all muzzleloaders are equal! Manufacturers use different specs when designing the rifling grooves in their muzzleloaders. There are several models of the Retriever, each precision designed to fit within the model's rifling tolerances. When you go to purchase a Retriever, read the muzzleloader models it fits.
